Basic Implant Prosthetics

A 1/2 day Lecture Course for General Dental Practitioners

This workshop will provide a beginners guide to single tooth implant restorations using NobelBiocare implants. It is aimed at general practitioners who have not restored a dental implant but would like to incorporate implant prosthetics into their practice. It is also suited to dentists who have only completed a few cases and would like to sharpen their clinical skills in the area of single tooth implant restorations.

The course will cover basic cases assessment of potential implant cases and explore the surgical and prosthetic prerequisites for single tooth implant replacement. Subjects covered in detail include: Abutment selection, communication with the dental laboratory, fixture head impression technique, dealing with cases that have been immediately loaded with temporary abutments and crowns, fitting the final abutment and crown, angulated screw channels, cement vs. screw retention, common complications and how to manage them. The course includes a hands-on exercise where participants will be able to practice fixture head impressions on models and familiarize themselves with the various implant/ prosthetic components with prosthetic training kits.

About the Presenter: Dr Michael Danesh-Meyer is a Specialist Periodontist and is Director at the Institute of Dental Implants & Periodontics in Newmarket, Auckland. Prior to establishing the institute Dr Danesh-Meyer was a Clinical Assistant Professor and Research Assistant in the Department of Periodontology at Temple University, School of Dentistry in Philadelphia, USA. He has taught implant dentistry and periodontics at postgraduate level and has authored numerous scientific articles and lectures both nationally and internationally on implant dentistry and tissue regenerative therapy.

Basic Implant Prosthetics: 1/2 Day Course, 13th April 2018, 1:00-5:00pm.
